Project Outline

Details

- Due at the start of the tutorial on June 8th
- 1 page or less
- Submitted on Canvas

Description

- Identify the organization you have selected and your connection to that organization - talk about the people who are involved (project sponsors, employees you will talk to, you, etc)
- Brief overview of the business process you plan to analyze - what does it look like currently?
- How can IT be used to improve that business process? What would the new process look like?
- Which specific processes (parts of the major process) are you specifically going to study?

Example

- Highland pub - sponsored by manager X, connection is that group member X is an employee there
- We want to analyze their employee scheduling process, currently use a calendar in the basement
- IT would help employees trade shifts online and know their shifts earlier
- Specifically: employee shift assignment, employee shift changes, employee availibility collection
